

ROAD's address

- ROAD has come a long way, but not yet where we want to be
- European CCS plans were ambitious, but we are now lagging behind
- CCS being industrial practice by - at least - 2030 is a necessity in our battle against global warning
- We need pilots and demonstration projects now
- Learning points:
 - cost reduction
 - knowledge sharing
 - find a business perspective
 - develop from small to big
 - international cooperation in the actual realization of projects

ROAD is the pathway for the development of CCS in Europe as a result of international cooperation
